BookView

You are here: Wiki >System Web>BookView (12 Sep 2009, ProjectContributor)EditAttach

BookView is an option available for the SEARCH macro. It allows you to display the result in "book view", that is, the whole content of topics is shown instead of a topic summary. This allows you to easily see a whole set of pages, which is useful for printing.

Bookview is however very resource demanding and should never be used in a search result set with too many results. Only use it if the number of found topics is 1-20 topics. For the same reason the bookview mode is not made available in any of the search templates.
