Usage (extended)

There are several other ways to put an image in a topic.

Shorthand notation:

In Main.SitePreferences!? set a macro for an ICON, for example:

```
* Set H = %ICON{help}%
```

Now you can use the icon by writing %H%

For extended use, check out Foswiki:Extensions.SmiliesPlugin that uses a different short hand than %MACROS%.

Full path:

In any topic, write %PUBURL%/SYSTEMWEB%/DocumentGraphics/help.png to show

You are not restricted to use the DocumentGraphics topic - in a similar way you can show attached images by replacing DocumentGraphics with the topic name.

To create an image with a link, write:

```
[ [WebHome] [%ICON{home}% Home] ] to get:   Home
```

To get rid of the underline under the space, write:

```
[ [WebHome] [%ICON{home}%] ]   [ [WebHome] [Home] ] to get:   Home
```

To get the full URL of the icon, use ICONURL:

```
%ICONURL{"toggleopen"}% gets you the image path:  
https://wiki.iac.ethz.ch/pub/System/FamFamFamGraphics/toggleopen.gif  
and that will get rendered as:
```
