## Inter-Wiki Link Rules (or Links to other Sites)

This topic lists all aliases needed to map Inter-Site links to external wikis/sites.

Whenever you write **ExternalSite:Page** it will be linked automatically to the page on the external site. The link points to the URL corresponding to the **ExternalSite** alias below, concatenated to the **Page** you choose. Example: Type **Wiki:RecentChanges** to get Wiki:RecentChanges, the RecentChanges page at the original Wiki site.

### How to define Inter-Site links

- Inter-Site links are defined in the tables below.
- Each entry must be of format:  
| **External site alias** | **URL** | **Tooltip help text** |.
- The Alias must start with an upper case letter and may contain alphanumeric letters.
- The URL and Tooltip Text may contain optional **\$page** formatting tokens; the token gets expanded to the page name.
- **Note:** The Tooltip Text must not contain any HTML tags (including <nop> escape code), no internal WikiWord links, and no external links. Hint: Escape '**WikiWords**' and '**\$page**'.
