ENV{"varname"} -- inspect the value of an environment variable

- Returns the current value of the environment variable in the CGI (Common Gateway Interface) environment. This is the environment that the CommandAndCGIScripts are running in.
- **Note:** For security reasons, only those environment variables whose names match the regular expression in {AccessibleENV} in the **Security Settings/Miscellaneous** section of `configure` can be displayed. Any other variable will just be shown as an empty string, irrespective of its real value.
- Example: `%ENV {MOD_PERL}%` displays as: not set
- If an environment variable is undefined (as against being set to the empty string) it will be returned as `not set`.
- Related: `HTTP_HOST`, `REMOTE_ADDR`, `REMOTE_PORT`, `REMOTE_USER`
